

CASE STUDY UNIVERSITY OF SALFORD

REDUCED WASHROOM COSTS BY 30% WITH SYSTEM 600

Following issues with wastage, toilet roll overuse, and high washroom maintenance frequencies, Arrow worked with the University of Salford to develop a bespoke dispensing solution to control paper consumption and improve washroom efficiency.

IMPROVING WASHROOM EFFICIENCY THE ARROW WAY

ADVISE

Arrow completed a detailed site investigation with the University to find a toilet paper dispensing system that would control paper consumption and reduce washroom costs. Following review of various systems, the University trialled our System 600 SynergySmart system.

SUPPORT

The trial saw the University achieve a 25% saving during term time, with a projected 30% saving over the summer time. Additionally, our unique **lifetime free-on-loan guarantee** on all dispensers meant the installation and all ongoing maintenance is cost-neutral to the University – helping combat rising budget pressures.

SUPPLY

The University embarked on a trial of our System 600 in washrooms throughout The Library building (the University's only 24-hour building), and performance monitored against previous spend/maintenance times to review efficiencies delivered.
