# DE-ICE ADVICE

## TOP TIPS FOR EFFECTIVE SALTING

- **APPLY** – Early in the evening before the frost settles, early in the morning before employees arrive and/or before freezing temperatures are forecast.
- This ensures salt has sufficient time to reduce the chances of moisture freezing, whilst saving you on the amount needed, to make the surface safe.
- **LOCATION** – Roads; car parks; pavements and walkways; sloped areas, steps or uneven routes; foot bridges or overpasses; entrances/exits to buildings; areas in the shade.
- **SPREAD UNIFORMLY** – Ensure the whole area is covered and there are no missed patches that can become slippery.
