

Escalator Riser Cleaning Tool How to Guide

There are a variety of escalator types, each with different tread patterns. RiserShine has made these easy to identify by providing colour coded tool heads for the common brand; Red, Blue, Black and Purple.

1

Before using the RiserShine tool, make sure the escalator is stationary.

2

Ensure that you are using the correct foam head and that it matches your escalators tread pattern, as illustrated above.

3

Remove the cassette cover from the foam head by using one hand to hold the tool against a hard surface and using the other hand to leverage the head from one end to the other.

4

Wrap the specialist escalator cleaning cloth around the cassette using the Velcro strips to hold it in place.

5

Snap the cassette wrapped in cloth back onto the tool head.

6

We recommend for the best results to spray the foaming cleaner, Tanex Performa Concentrate onto the cloth before scrubbing.
