

CASE STUDY

TAMESIDE NHS FOUNDATION TRUST

Tameside NHS Foundation Trust operates in an environment where hygiene standards are of the utmost importance. Preventing cross-contamination and hospital-acquired infections remains a constant challenge. Rising costs and the need to maintain superior patient care prompted the Trust's cleaning team to investigate a more efficient cleaning solution.

Responsible for cleaning over 20 square miles of hospital buildings, with a diverse range of risk areas, the Trust required a cleaning solution that would enhance infection control while simplifying transportation of cleaning products and equipment across the hospital.

"ARROW'S TROLLEYS HAVE BEEN A LIFESAVER WITH REGARDS TO DEEP CLEANING. THEY HAVE THE ROOM FOR ALL OUR USUAL CLEANING SUPPLIES PLUS THE EXTRA EQUIPMENT WE NEEDED, AND WE HAVE INTRODUCED THEM ACROSS THE TEAM."

PROBLEM

Responsible for cleaning over 20 square miles of hospital buildings, with a diverse range of risk areas, the Trust required a cleaning solution that would enhance infection control while simplifying transportation of cleaning products and equipment across the hospital.

SOLUTION

Arrow conducted a comprehensive assessment of the Trust's cleaning processes and recommended a bespoke modular trolley system. Designed specifically to meet the hospital's requirements, our modular trolleys provided:

- **Custom configurability**, tailoring trolley design to Trust requirements.
- **Enhanced infection control**, including an integrated pre-dosed mopping system, high-capacity internal storage cupboard, and secure waste disposal unit.
- **Improved operational efficiency**, facilitating effective management of cleaning operations and enabling more efficient deep cleaning practices.

OUTCOME

Following a successful trial period, the trolleys were implemented hospital-wide and immediately proved effective – helping successfully enhance infection control, improve operational efficiency, and support a higher standard of cleanliness.
